Basic Python

1. Split this string

Output should be a List: ['Hi', 'there', 'Sam!']

```
s = "Hi there Sam!"
```

```
s="Hi there Sam!"
x=s.split()
print(x)
```

```
['Hi', 'there', 'Sam!']
```

2. Use .format() to print the following string.

Output should be: The diameter of Earth is 12742 kilometers.

```
planet = "Earth"
diameter = 12742
```

```
s="The diameter of {planet} is {diameter} kilometers"
print(s.format(planet = "Earth", diameter = 12742))
```

```
The diameter of Earth is 12742 kilometers
```

3. In this nest dictionary grab the word "hello"

```
d = {'k1':[1,2,3,{'tricky':['oh','man','inception',{'target':[1,2,3,'hello']}]}]}
```

```
d = {'k1':[1,2,3,{'tricky':['oh','man','inception',{'target':[1,2,3,'hello']}]}]}
d['k1'][3]['tricky'][3]['target'][3]
```

```
'hello'
```

Numpy

```
import numpy as np
```

4.1 Create an array of 10 zeros?

4.2 Create an array of 10 fives?

```
np_zero=np.zeros(10)
np_zero
```

```
array([0., 0., 0., 0., 0., 0., 0., 0., 0., 0.])
```

```
np_five=np.ones(10)*5
np_five
```

```
array([5., 5., 5., 5., 5., 5., 5., 5., 5., 5.])
```

5. Create an array of all the even integers from 20 to 35

```
num=np.arange(20,35,2)
num
```

```
array([20, 22, 24, 26, 28, 30, 32, 34])
```

```
array([20, 22, 24, 26, 28, 30, 32, 34])
```

6. Create a 3x3 matrix with values ranging from 0 to 8

```
n=np.arange(9).reshape(3,3)
print(n)
```

```
[[0 1 2]
 [3 4 5]
 [6 7 8]]
```

7. Concatenate a and b

a = np.array([1, 2, 3]), b = np.array([4, 5, 6])

```
a = np.array([1, 2, 3])
b = np.array([4, 5, 6])
c = np.concatenate((a,b))
c
```

```
array([1, 2, 3, 4, 5, 6])
```

Pandas

8. Create a dataframe with 3 rows and 2 columns

```
import pandas as pd
```

```
student=[{'Name':"Anupama",' Course':"BCA"},{'Name':"Sam",' Course':"Botony"},{'Name':"Roshni",' Course':"BCA"}]
st=pd.DataFrame(student)
print(st)
```

```
      Name  Course
0  Anupama     BCA
1      Sam  Botony
2   Roshni     BCA
```

9. Generate the series of dates from 1st Jan, 2023 to 10th Feb, 2023

```
time=pd.date_range("2023-1-1","2023-2-10")
print(time)
```

```
DatetimeIndex(['2023-01-01', '2023-01-02', '2023-01-03', '2023-01-04',
               '2023-01-05', '2023-01-06', '2023-01-07', '2023-01-08',
               '2023-01-09', '2023-01-10', '2023-01-11', '2023-01-12',
               '2023-01-13', '2023-01-14', '2023-01-15', '2023-01-16',
               '2023-01-17', '2023-01-18', '2023-01-19', '2023-01-20',
               '2023-01-21', '2023-01-22', '2023-01-23', '2023-01-24',
               '2023-01-25', '2023-01-26', '2023-01-27', '2023-01-28',
               '2023-01-29', '2023-01-30', '2023-01-31', '2023-02-01',
               '2023-02-02', '2023-02-03', '2023-02-04', '2023-02-05',
               '2023-02-06', '2023-02-07', '2023-02-08', '2023-02-09',
               '2023-02-10'],
              dtype='datetime64[ns]', freq='D')
```

10. Create 2D list to DataFrame

lists = [[1, 'aaa', 22], [2, 'bbb', 25], [3, 'ccc', 24]]

```
lists = [[1, 'aaa', 22], [2, 'bbb', 25], [3, 'ccc', 24]]
```

```
df=pd.DataFrame(lists,columns=['Id','Name','value'])
print(df)
```

```
   Id Name  value
0   1  aaa     22
```

```
1   2  bbb     25
2   3  ccc     24
```
